

# Continuous Thawing Tank

The Continuous Thawing Tank allows thawing frozen blocks of fish and cephalopods as well as IQF frozen product. The product is moved with care along the tank, during this journey recirculation pump, water exchanger and air blowers helps to get the optimum product defrosted. Cold water defrosting process provides maximum product performance for the next process (as filleting), in this kind of process the product defrosting is progressive and homogeneous

- Continuous processing.
- Can handle frozen blocks of fish and cephalopods.
- Can handle IQF frozen product.
- Robust and modular design.
- Trommel filtering unit included in the recirculation system.
- User friendly interface with recipes configurator for different kind of products included.
- Automatic Cleaning Process included.
- Capacity up to 5.000kg/h.
- Alarms notification system by email included.
- OPC-UA connection included.
- Additional equipment: Equalizing Temperature Tank could be added when the product must be fileted after thawing.
