

GRP 3500 Ensilage Unit

Ensilage unit with integrated grinder and circulation pump is an effective solution for making ensilage in the fishing industry. The oval shape of the tank makes an optimal circulation in the ensilage with no dead points that can cause problems.

GRPG has a powerful grinder pump to grind, circulate and unload the tank. The system includes an automatic dosage pump for formic acid. The dosage pump secures the right pH level in the tank, and is a secure way of handling the acid for the operators. The inlet is as low as possible to make the loading easy, and the hatch is large to prevent spill when filling the fish into the tank. The tank is easily filled with 1000l standard bins. The outlet is equipped with a 4" valve.

SPECIFICATIONS:

- Material: Stainless Steel aisi 304/316
- Outlet flange: 4"
- Acid dosing: Standard dosage pump
- Control cabinet: OptimarStette software
- Standard equipment: Fork lift pockets/lifting lugs
