

Thawing Tank™

The Thawing Tank allows thawing frozen blocks of fish and cephalopods as well as IQF frozen product. The product is loaded to the tank using conveyors on top, during the thawing process recirculation pump and water exchanger helps to get the optimum product defrosted. Cold water defrosting process provides maximum product performance for the next process (as fileting), in this kind of process the product defrosting is progressive and homogeneous.

- Batches or continuous processing.
- Extracting conveyor moves the product to the process/production lines.
- Can handle frozen blocks of fish and cephalopods.
- Can handle IQF frozen product.
- Robust and modular design.
- User friendly interface with recipes configurator for different kind of products included.
- Semi-Automatic Cleaning Process included.
- Capacity up to 10.000kg/tank.
- Alarms notification system by email included.
- OPC-UA connection included.
- Additional equipment: Trommel filtering unit in the recirculation system.
- Additional equipment: Air blowers.
