

## DESINFECTA OZON SYSTEM

Desinfecta™ uses ozone-enriched fresh/seawater to disinfect tanks, circulation systems, etc. in accordance with applicable requirements.

Desinfecta™ uses ozone-enriched fresh/seawater to disinfect tanks, circulation systems, etc. in accordance with applicable requirements. Ozone also reacts on organic materials and helps loosen contaminants.

It is a fully assembled ready to install compact ozone system for different applications and volume of raw water. The Desinfecta™ system can be installed and operated within hours.

Ozone enriched water has the benefit of replacing the chemicals and hot water typically used in cleaning the inside of pipelines, tanks and external surfaces.

### Benefits:

- Short payback period
- No bacteriological resistance against ozone
- Labor saving (less handling and storing of chemicals)
- Ozone management systems eliminates inhalation worries
- Ozone is not harmful to the environment
- Ozone is generated "on-site".
