

SPECIFICATIONS

Material	Stainless steel aisi 304
Water inlet	DN 75
Water outlet	DN 150
Capacity	5000 - 15000 units/hour
Software	Stette automatic stunning system
Additional equipment	CO2 decrease, O2 diffuser

STUNNING LINE FOR SMOLT

Stunning line developed over several years together with customers. Stette stunning lines are built for effective and gentle handling of the smolt.

Stunning line developed over several years together with customers. Stette stunning lines are built for effective and gentle handling of the smolt. With internal circulation of the anesthesia and a system for preventing CO2 build up in the water, we secure fish welfare at the highest level. The system is delivered in several combinations to cover the needs for the user.

With the Stette stunning software the system is used unmanned, and the operators at the vaccinating machines are also operating the stunning line. The automated system secures accurate holding time in the anesthesia, and all the fish will get the same treatment.
