

## SPECIFICATIONS

Energy Consumption	4-21 kW
Water Consumption	0,2-4 litres/min
Material	Aisi 304
Volume vacuum tank	100-500 litres

## VACUUM CLEANING

Cleaning the fish with vacuum is an effective way of improving the quality of the fish in a hygienic way.

The operator uses a vacuum head formed as a scraper, spoon or pipe to clean parts of guts or blood of the fish. All the waste goes from the operator through pipes to the cyclone for separating air and particles. For one standard system it is possible to use 4 stations, but it can be built for as many operators as needed. The cyclone is delivered with both automatic and manual emptying system. Vacuum system is designed for effective cleaning and simple hygiene.
