

SPECIFICATIONS

Maximum length	200m potentially 500m
Maximum height	70m potentially 300m
Maximum incline	45 degrees
Minimum corner radius	2 m
Maximum feed rate	1,5 fish/sec depending on length
Fish size range pr tube	3-8 kg and 7-12 kg (multiple tubes available)
Power consumption	5-20 kW
Cleaning time	30 minutes

WHOOSHH - TRANSPORTINGSYSTEM FOR FISH

Less wasted space, less wasted time, less wasted energy, and better quality and high value product yield.

The Whooshh transport system is designed to improve product transport before it is packaged. Less wasted space, less wasted time, less wasted energy, and better quality and high value product yield. Replace expensive "hand carry" systems that utilize boxes/ totes (and associated cleaning costs), pallets, ice, forklifts, and labor. By reducing these wastes we increase your operational efficiency. Measurable metrics all improve, such as: energy consumption, labor use, product yield per square meter and per employee. Simpler, gentler, and more hygienic product transport is now possible with Whooshh transport systems. We anticipate that our customers will realize a positive ROI in two years time or less – and in many cases much less. With Whoosh transport, set a new higher standard for quality, yield, and productivity. You can't afford not to adopt, regardless of your previous capital investments.
